Continuation of 11. does NOT place the application in condition for allowance because: Machida clearly and explicitly teaches the limitations of the claims recited. Machida teaches changes in printing device addresses are updated thereby eliminating such management tasks (see page 1, [0014]). Machida also teaches that the printing device is detected via the address assignment message (see page 1, [0012]). Clearly such recitation shows that a printing device is detected using the most current address assignment and any subsequent access to the printing device will use the updated address. Such knowledge is explicit to one of ordinary skill in the art. In response to the argument of claim 8, the preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951). With regards to claims 9 and 15 arguments, the applicant(s) seem to be asserting that because Machida teaches of re-establishing connection via teachings of Fig.13 or Fig.14, that the limitation "impossibility" is not taught and that the teachings are concerned with situation dwelling on the possibility. Clearly, to one of ordinary skill in the art, although connection is not available or possible, if connection is made in the future, such connection was clearly never impossible and therefore the term "impossible" and its functionality is clearly not a novel feature of the invention and therefore will not distinguish over prior art. For these reasons, the claims remain rejected.
